

RITIK AGARWAL

Full-Stack Developer | B.Tech CSE, VIT Bhopal | India

ritikagarwal2468@gmail.com | ritikagarwal.me | [LinkedIn](#) | github.com/Ritik0712-ai | [LeetCode](#)

SUMMARY

Full-stack developer and 3rd-year CS student who builds and deploys complete products — frontend, APIs, database and hosting — and writes up the decisions behind them. Currently a full-stack web development intern at Labmentix, practising DSA and system design on the side.

EDUCATION

Vellore Institute of Technology, Bhopal — B.Tech in Computer Science & Engineering Sep 2024 – 2028
3rd Year · Expected Graduation: 2028

Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, System Design (Self-Study)

EXPERIENCE

Full-Stack Web Development Intern — Labmentix Jun 2026 – Present

- Building and shipping features across the frontend, APIs and database of a production web codebase.

Senior Marketing Manager — AIESEC in Bhopal Feb 2026 – Present

- Promoted from Junior Marketing Manager (Feb 2026) to Senior Marketing Manager (Aug 2026) within six months.
- Serve on the Governing Board of the marketing department.

PROJECTS

TripSync — AI Trip Planner with Real-World Constraints [Live](#) | [Code](#)

Stack: Next.js, TypeScript, PostgreSQL, Neon, Drizzle ORM, Better Auth, Groq / Gemini APIs, Tailwind CSS

- Generates day-by-day itineraries that respect opening hours, meal times, travel time between stops and a fixed budget; output is validated as structured JSON and stored as relational rows.
- Routed generation through an LLM provider chain (Groq, then Gemini) ordered by an environment variable, so a provider outage is a restart rather than a redeploy.
- Fixed an "infinite recursion detected in policy" failure between two row-level-security policies by moving access control into one owner/editor/viewer check that every route calls.
- Migrated mid-build from Supabase to Neon Postgres with Drizzle ORM and Better Auth without losing working features.

Voxora — Multilingual Text-to-Speech that Translates First [Live](#) | [Code](#)

Stack: React, Vite, Node.js, Express, PostgreSQL, Neon, JWT Auth, Cloudflare R2

- Built a translate-then-synthesise pipeline so the chosen language is the one you hear — 30 neural voices across 15 languages including Hindi, Bengali and Tamil.
- Diagnosed a production-only failure: server-side translation was IP rate-limited (HTTP 429/403); moved translation to the browser so each visitor uses their own IP, keeping a server fallback.
- Moved generated audio from an ephemeral filesystem to Cloudflare R2 behind a storage interface; verified by deleting local files and confirming playback still returned HTTP 200.
- Runs entirely on free tiers with no billing account; speech providers are swappable through one environment variable.

MindSpace — Anonymous Mental-Wellness Platform [Live](#) | [Code](#)

Stack: React, Node.js, MongoDB, NLP APIs

- Anonymous-first platform for people who cannot afford ₹1,500–3,000 therapy sessions: no real name needed and end-to-end encrypted journal entries.
- Journaling and habit tracking feed an NLP sentiment-analysis layer that turns entries into personalised weekly insights.
- Added an anonymous peer-support feed alongside secure authentication and real-time data sync.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, C/C++, SQL

Frontend: React, Next.js, Vite, Tailwind CSS

Backend: Node.js, Express, REST APIs, JWT Auth, Better Auth

Databases: PostgreSQL, MongoDB, MySQL, Redis, Drizzle ORM

Cloud & AI: Groq / Gemini APIs, Supabase, Neon, Vercel, Render, Cloudflare R2, Git & GitHub
